REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance.
2. The instant invention relates to apparatus and method for detecting a traffic lane mark drawn on a road surface using a camera mounted on an automotive vehicle.

Claim 1 representative of claims 16 and 17, providing a photograph device to photograph a situation of a running road in a vehicular forward direction, a traffic lane detection window setting section that once sets one traffic lane detection window on an image data photographed by the photograph device.

The invention is novel due to the "weight value modifying section that modifies a weight value to each of the traffic lane detection windows in accordance with the edge intensity in the related one of the noise detection windows, and a road contour calculating section that calculates a road contour using any of the traffic lane marks detected by the window internal traffic lane detecting section and the weight value modified by the weight value modifying section.

The closest prior art of record (Yasui) teaches detecting the position of a subject within localized region without being affected by changes in the condition of the road surface, weather, time of day, fixed lighting, and other changes. But do not suggest weight value modifying section that modifies a weight value to each of the traffic lane detection windows in accordance with the edge intensity in the related one of the noise detection windows.

These key features in combination with the other features of the claimed invention are neither taught nor suggested by the art of record.

Claims 1-17 are allowed.
